The power of a professional white

You've seen the magazines. You've read the headlines.

You know that whitening your smile is one of the least expensive and least invasive ways to enhance your appearance. You believe that your smile is the first thing others notice about you. And, like it or not, it says more about you than any other physical feature.

So, it's important to keep it looking bright... right?

You might be under the impression that your dentist has only one option for whiter teeth. And maybe you don't think you can afford that option. That may have been true in the past. But it's not true today. The truth is that your dentist has several options for whiter teeth, something to fit your lifestyle and your checkbook.

Allow us to introduce you to the menu of premium whitening products available to you by your dentist and the number-one rated Opalescence Tooth Whitening System.

OTC Alternative

Tréswhite comes in a pre-filled, adaptable tray ready to adhere to your teeth in one easy step. Simply place the tray in your mouth, adjust the thin membrane as it adheres to your teeth and wear it for 60 minutes, one time a day. It's that easy.

It is simple and easier to use than supermarket products. And it is a prescription strength formula at an affordable price. This means more effective results, faster.

Customized

For over a decade, this procedure has set a whitening standard for all other systems. The Opalescence Take-Home System works so well because everything about it is customized. Your dentist first takes impressions of your teeth and then creates a customized tray that fits your mouth, perfectly and comfortably.

After your trays have been created, your dentist will send you home with your custom fitted trays and syringes of Opalescence gel. This gel contains powerful whitening formulations that you will put in your custom trays each day as you whiten your smile.

In-Office

If you're looking for white teeth... fast, this is the option for you. Opalescence Xtra Boost is a procedure that is done right in your dentist's chair. You may have seen procedures that utilize a light or laser to activate chemistry on the teeth. Well, a lightsource is no longer needed to achieve the same results. Opalescence Xtra Boost is chemically activated rather than light activated, meaning that it activates itself at the time it is placed on your teeth.

Opalescence Xtra Boost is a very powerful solution and requires that your dentist, or auxiliary personnel, apply the solution and monitor your progress. You will be in the chair for approximately one hour as they work to reveal your brighter smile.

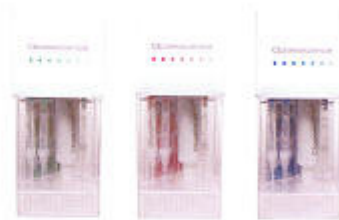

At the end of the procedure, most likely you will be sent home with a take-home product to aid in the continued whitening progress of your smile.

After care

Keep your teeth white. Once you have a whiter smile, you'll want to keep it that way. Opalescence Whitening Toothpaste is the perfect way to keep your smile in top form.
